ceralsio ceramic properties

Ceralsio is a beautiful, hard-wearing and versatile range of ceramic surfaces, built for the demands of modern living.

Thanks to its lack of pores, Ceralsio is completely impermeable and highly stain resistant. Its many benefits also include a strong resistance to scratch, heat and wear and tear. As a very hard material it is suitable for kitchen and bathroom countertops, flooring and wall-cladding. Its colour and texture remain unchanged even when Ceralsio is used outdoors, since it can withstand the effects of ultra-violet rays without its surface appearance being altered in any way.

Ceralsio has been developed by using the highest grade of ceramic material. The selection and fusion of the purest of materials, compacted at a force of 4,000 kg/m² and sintered at temperatures of over 1200°C make it a porcelain surface. The highly innovative manufacturing process creates unique, unrepeatable finishes, thanks to the use of the high-precision "Full Digital" printing system.

Thanks to its properties, Ceralsio guarantees versatile, eco-friendly, innovative surfaces that help to make life easier and more convenient.

For more information on features and advantages of Ceralsio, see page 112.

colour collection

The Ceralsio collection has been inspired by nature itself and includes classic surfaces such as Soft White, right through to sophisticated, strong designs such as Calacatta Extreme and Marquina.

Ceralsio is available in a large range of colours, in a 12 mm thickness, and in a natural, textured, satin or polished finish.

umbria

umbria

With a growing trend for darker materials in interior design, Umbria brings an air of sophistication to any setting. Inspired by the natural beauty of marble, with all the ease of maintenance that ceramic brings, the rich, dark tones of Umbria are offset by a lighter fleck running throughout the surface, while its textured finish is wonderfully tactile.

A dark, monochromatic photograph of a desk. In the foreground, a metal mesh pen holder is filled with several pens. To the left, a stack of papers or books is visible. In the background, a chair with a woven backrest is partially visible. The overall scene is dimly lit, creating a professional and focused atmosphere.

technical information

features and advantages

RESISTANT TO WEAR AND TEAR

Thanks to Ceralsio technical characteristics, this is the most highly resistant countertop on the market, ideal for use indoors and out.

HIGHLY SCRATCH RESISTANT

Food can be cut directly on top of the surface without it being damaged. Even so, ceramic cutting boards, like Ceralsio, or boards made of other materials should be used for cutting.

RESISTANT TO FROST AND ICE

Its low water absorption rate of less than 0.2% makes it ideal for outdoor environments where frost and ice is common.

HEAT RESISTANT

Ceralsio does not burn or give off smoke or toxic substances when exposed to high temperatures. Hot cooking utensils like frying pans or saucepans can be rested on its surface without it being damaged.

IMPACT RESISTANT

Ceralsio has a high resistance to knocks and impacts by everyday objects or utensils. (Everyday objects found in kitchens, restaurants, laboratories etc).

EASY TO CLEAN AND CARE FOR

No extra care or special products are needed to clean it. Stains can be removed with water or mild cleaning products.

STAIN RESISTANT

Ceralsio is not affected by products like solvents, detergents, bleach, oil, vinegar or citrus juice, provided that the stains are cleaned away within 24 hours.

HYGIENE

Because it is a non-porous surface, the build-up of bacteria or mould is prevented, and food can be placed in direct contact with it.

RESISTANT TO ULTRA-VIOLET RAYS

Ceralsio surfaces are colourfast despite the passing of time, even when used outdoors.

BENDING STRENGTH

It can withstand a high weight without bending or becoming deformed, with the entire surface remaining flat.

10-YEAR WARRANTY

Visit ceralsio.co.uk to register your surface and activate your warranty.

Ceralsio is a non-toxic environmentally-friendly product that complies with European legislation under current EU regulation no. 305/2011 of the European Parliament and the Council and specific standards applicable to the tile sector.

All first-choice Ceralsio ceramic surfaces comply with and even surpass ISO standards 13006:1998 and EN 14411:2003 regarding the definition, classification, characteristics and marking of ceramic tile materials.

Ceralsio also has a Quality Control System, which it applies to the whole manufacturing and storage process.

care and maintenance

RECOMMENDED USES

For the ceramic slabs to conserve their original beauty, these guidelines should be followed:

- Use wooden chopping boards to cut food. Ceramic knives have a similar hardness to the countertop and so they should not be used to cut things on its surface.
- In spite of being a material of great hardness, it is not recommended to clean the Ceralsio surface with materials whose hardness is higher than ceramic.
- Countertops with polished finishes or dark colours are easier to scratch and so metal objects should not be dragged directly across their surfaces.

KNOCKS

Ceralsio ceramic slabs stand out for their hardness and resistance. Even so, care must be taken with those parts of the worktops and countertops most exposed to knocks, such as corners, edges and bevel edges.

CLEANING

Ceralsio has an almost non-porous surface and so it is easy to clean. Even so, a series of guidelines should be followed to remove everyday stains typically found in kitchens and bathrooms.

The stains should be cleaned away as soon as they occur, using a cloth moistened with water, to prevent them from drying. In the case of dry stains, moisten the area with hot water in order to soften the dirt and then remove it with a clean cloth. Before any type of special cleaning product is used on ceramic slabs with a polished finish, test it out on an area that is not very visible to check that the shine or colour is not affected by the product.

The recommendations above cannot reflect all possible applications or factors involved in the on-site use and installation of our products. As a result, before they are used, the project manager, architect or materials specifier should make sure that these materials and any others used to lay them are suitable for the intended use, being fully responsible for the outcome of their use. CRL Stone cannot be held liable if these recommendations are not followed or if the slabs are wrongly laid. No claims will be accepted for slabs once they have been laid.

LUGANO - QZ151

New for 2020

Inspired by natural stones and the lean for industrial style in the kitchen and the bathroom, our new range offers a modern twist on a design classic that will work in any room.

All surfaces are non-porous, scratch resistant, heat resistant and easy to care for.
