

PRODIM

WORLD LEADER IN COMPLETE DIGITAL TEMPLATING SOLUTIONS

STONE INDUSTRY

STONE INDUSTRY SOLUTIONS FOR:

PHYSICAL TEMPLATES BALUSTRADES

WINDOW SILLS FACADES

WALLS **INTERIORS**

COUNTERTOPS

MONUMENTAL WORKS

BACKSPASHES

STAIRS FLOORS

BUSINESS MANAGEMENT AND MORE

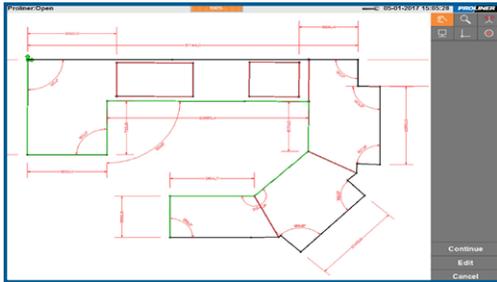

Professional Dimensioning *for* **Production Improvement**

Complete solutions for the stone industry

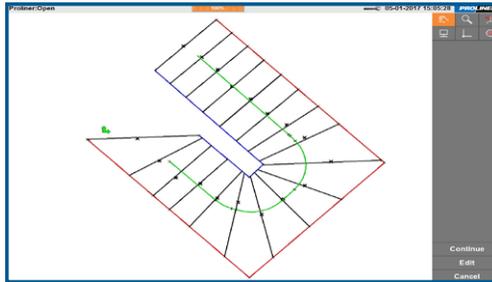

Stay competitive, go digital!

Proliner technology has been successful in the natural stone industry from day one and Prodim focusses on the stone sector ever since. Backed by over 20 years of experience we can offer you digital templating tools and software solutions to help your business grow. Prodim's mission is to improve, always

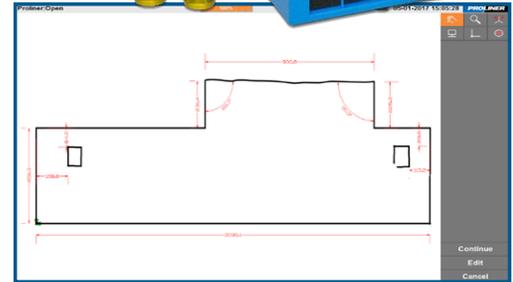

- Measure fast and accurate with the Proliner
- Measure on-site or in the factory
- Eliminate mistakes, save costs
- Physical molds become redundant
- Application-based stone industry software for digital templating and connecting business processes
- Expand your business activities, use the Proliner's flexibility

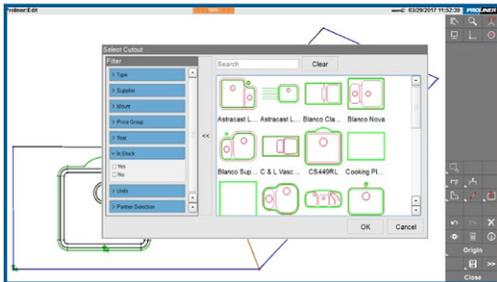

Countertops and backsplashes

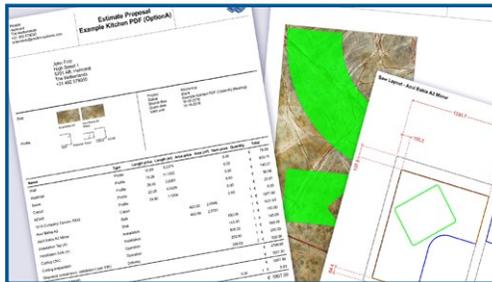

Stairs

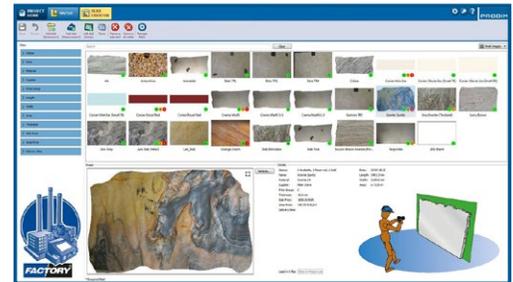

Physical Templates

Proliner CT - Add materials, profiles and cut-outs from your library to your measurement on-site

Prodim Factory - Create quotations based on drawings

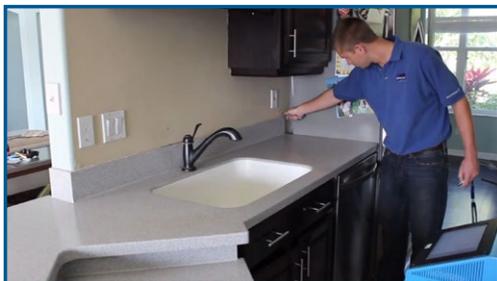

Prodim Factory - Digitized slab inventory

Proliner series

Measure 2D and 3D shapes fast, easy and accurate

The Proliner is a portable digital measuring tool with patented technology: Measuring with a wire. At the end of the wire is a metal measuring pen. With this measuring pen you can simply mark the relevant points. These points are directly translated into a digital DXF CAD file. Straight, curved and very complex shapes can be measured fast and accurate from every position.

The Proliner is the fastest, most accurate, reliable and durable digital templating solution in the market. Measuring with a wire does not require targets and has no reflection inaccuracies and therefore the Proliner gives the best return of investment to stone fabricators.

Easy measurement of straights, curves and angles

The Proliner is very versatile

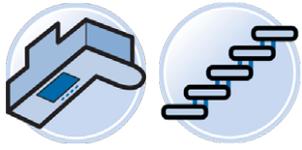

Levelling and the set-up of targets are not required

Our mission is to improve, always!

Application-based tools and software

The standard software that comes embedded with the Proliner enables you to configure measurement settings, create measurement files, view measurement results and export DXF CAD-files. To get the most out of the Proliner technology Prodim developed additional product solutions for the stone industry, for example:

Dedicated templating apps for the stone industry:

Application-based apps for measuring countertops, backsplashes, stairs and physical templates. Operators start a project measurement by selecting a dedicated app on the Proliner. Proliner measurement settings and available functionalities are already tuned for the job at hand, which simplifies the measuring process and ensures accurate results.

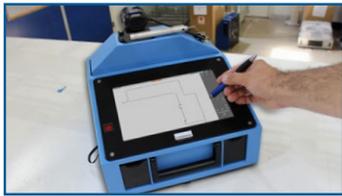

Proliner File Transfer mobile app

Save valuable time by using the Proliner File Transfer mobile app to transfer project measurement files from the Proliner to a mobile device (via Bluetooth) and onwards to the factory.

Proliner CT:

Stone CT software is installed directly on the Proliner and operated with the touchscreen. The software offers the following main additional functionalities for digital templating stone constructions:

- Extra (CAD) features to easily check, edit and finalize measurements on-site
- Instant tangential creating fluent lines for quick processing by a CNC
- Add cut-outs, production profiles and materials from a library
- Place cutting lines and create separate elements
- Add detailed project information and notes for processing
- Export drawings and reports for the customer and production (DXF and PDF)

The same software (called Factory Edit CT) is also available for installation and operation on a laptop or desktop and interconnects with the Prodim Factory software modules.

Prodim Stairs:

Stairs offers a unique solution to the task of measuring and fabrication of stair coverings.

Prodim Procutter:

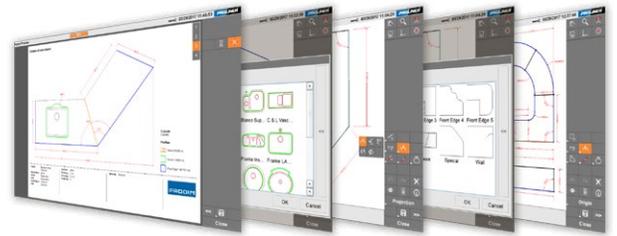

Use Proliner measurement data and create physical templates for production.

Prodim Factory:

Prodim Factory software enables stone shops to take digitizing to the next level. Factory software offers multiple solutions for stone shops to manage and digitize business processes in the easiest most efficient manner.

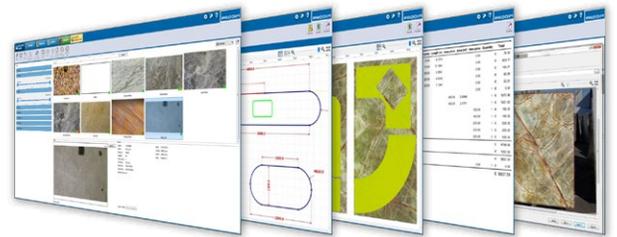

Proliner File Transfer App - Easy file transfer

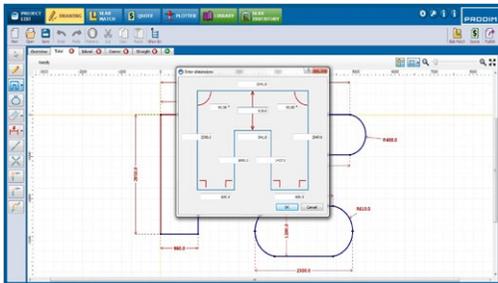

Proliner Stone CT - Check, edit and finalize your measurements

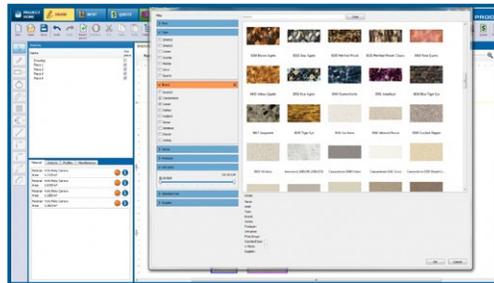

Procutter - Create your physical templates

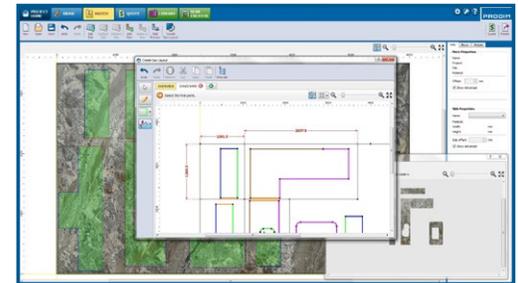

Prodim Factory - Connect field, office and production

Prodim Factory - Quickly sketch a countertop or shape based on your customers wishes

Prodim Factory - Add the type of material your customer wants from your catalogue

Prodim Factory - Match your design on a digitized slab from your inventory

STAY COMPETITIVE, GO DIGITAL

SAVE COSTS, IMPROVE THE LEAD TIME AND OVERALL QUALITY OF YOUR TEMPLATE PROCESS

Prodim will analyze your business activities, particular requirements and use the many years of experience in the stone sector to compose the best total package offer for improving your templating and business processes now and looking towards the future. **Contact Prodim for your tailored package.**

Example of an application-based package used in the stone industry:

PROLINER TEMPLATOR PACKAGE

- Proliner
- Proliner apps:
CT, Templates
- Proliner File Transfer mobile app
- Prodim Factory:
Home, Library, Draw
- Backpack
- Tripod
- 2 Batteries + Charger
- 4 Small leapfrog Pods
- Training

PROLINER FABRICATOR PACKAGE

- Proliner
- Proliner apps:
CT, Templates
- Proliner Smartphone Apps (Android)
- Prodim Factory:
Home, Library, Draw,
Edit CT, Match, Slab Creator, Quote
- Backpack
- Tripod
- 2 Batteries + Charger
- 4 Small leapfrog Pods
- Training
